

100 Real Life Chess Tactics Puzzles To Make You Better Player Chess Puzzles And

Chess is a game of strategy and tactics. While strategy is important for long-term planning, tactics are essential for winning games in the short term. Tactics involve making quick, calculated moves that can lead to checkmate or other advantages.

There are many different types of chess tactics, but some of the most common include forks, pins, skewers, and discoveries. Forks are moves that attack two or more pieces at the same time. Pins are moves that prevent a piece from moving because it would expose another piece to attack. Skewers are moves that attack a piece that is protecting another piece. Discoveries are moves that remove a piece that was protecting another piece, thus exposing it to attack.
