In this book, Neil deGrasse Tyson and Michael A. Strauss take readers on a guided tour of the cosmos, explaining everything from the Big Bang to black holes in a witty and accessible way. They cover a wide range of topics, including:

- The origin and evolution of the universe
- The different types of stars and planets
- The formation and properties of galaxies

- The nature of dark matter and dark energy
- The search for extraterrestrial life

Tyson and Strauss write with a clear and engaging style, and they are not afraid to poke fun at themselves and their fellow physicists. They also include many beautiful illustrations and photographs to help readers visualize the wonders of the universe.

Whether you are a complete novice to astrophysics or a seasoned expert, you will find something to enjoy in this book. It is a must-read for anyone who wants to understand the universe we live in.

### **Praise for *Astrophysics for People Who Think Physicists Are Full of Shift***

"A witty and accessible to astrophysics, perfect for those who think physicists are full of shift." - **The Washington Post**

"Tyson and Strauss have written a book that is both informative and entertaining. They make the complex world of astrophysics accessible to everyone, and they do it with a sense of humor." - **The New York Times**

"A must-read for anyone who wants to understand the universe we live in."  
- **Scientific American**

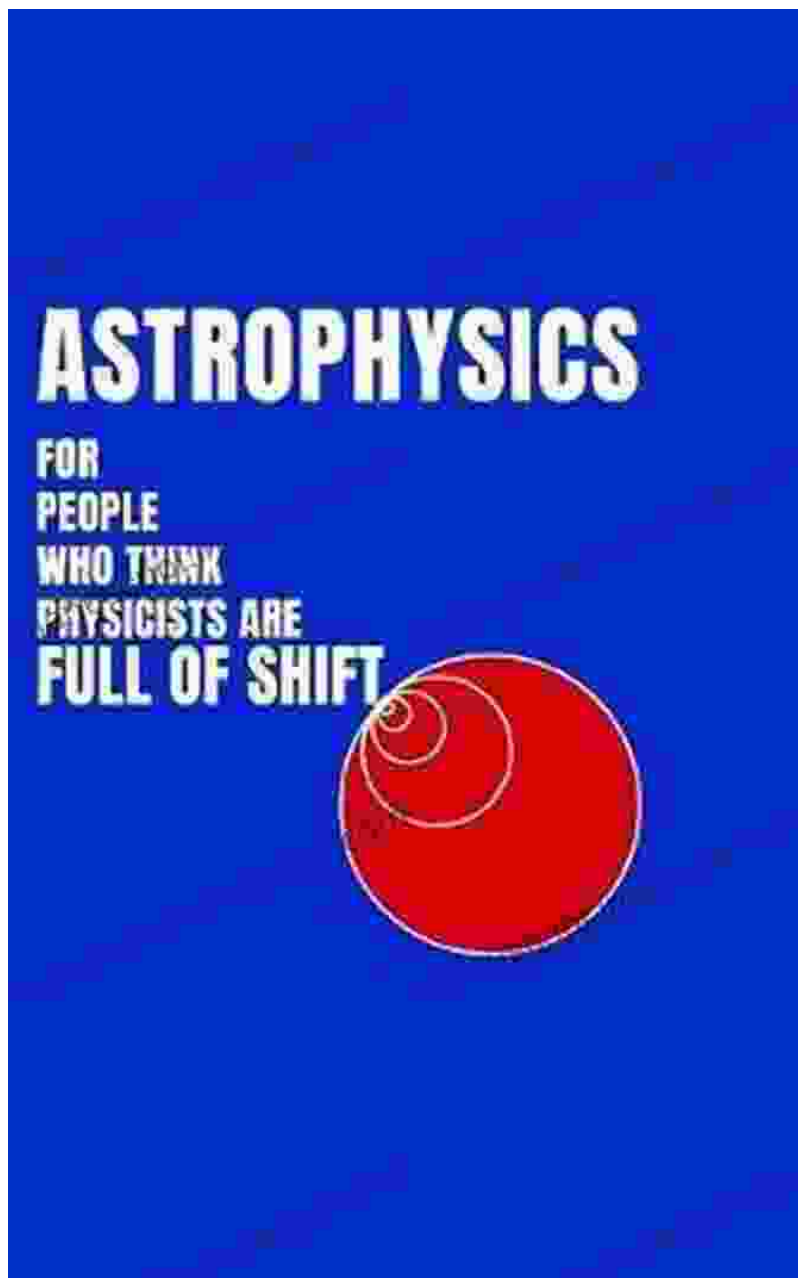

### **About the Authors**

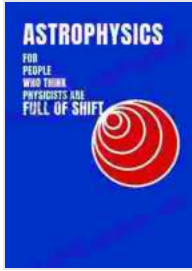

Neil deGrasse Tyson is an astrophysicist, author, and science communicator. He is the director of the Hayden Planetarium at the American Museum of Natural History, and he has hosted the television shows *Cosmos* and *StarTalk*.

Michael A. Strauss is an astrophysicist and professor of astronomy at Princeton University. He is a leading expert on the large-scale structure of the universe.
