It's true. Horses are not just the gentle giants we see in movies and on TV. They are also animals that are capable of great violence. In fact, horses have been known to kill and eat other horses.

This may come as a surprise to many people, but it's a fact that has been documented by scientists and animal rights activists. In one study, researchers found that horses that were given the opportunity to eat meat would do so without hesitation. And in another study, researchers found

that horses that were raised in captivity were more likely to kill and eat other horses than horses that were raised in the wild.

So what does this mean for us? It means that we need to be aware of the dark side of the horse industry. We need to know that horses are not always the gentle creatures we think they are. And we need to be prepared to take action to protect horses from cruelty and abuse.

The Meat Eating Horse

Horses are not natural meat eaters. Their digestive systems are not designed to process meat, and they do not have the teeth or claws that are necessary for hunting and killing prey. However, horses have been known to eat meat on occasion. This is usually done when they are starving or when they are fed meat by humans.

When horses eat meat, they are at risk of developing a number of health problems, including:

- Colic
- Diarrhea
- Weight loss
- Death

In addition to the health risks, meat eating can also lead to behavioral problems in horses. Horses that eat meat may become aggressive and unpredictable. They may also start to exhibit cannibalistic behavior, which can be very dangerous.

The Murderous Horse

Horses are not typically aggressive animals, but they can become violent if they feel threatened or if they are protecting their territory. In rare cases, horses have been known to kill and eat other horses. This is usually done when the horses are in close quarters, such as in a stable or a pasture.

There are a number of factors that can contribute to horse-on-horse violence, including:

- Competition for food or water
- Territorial disputes
- Boredom
- Stress
- Pain

Horse-on-horse violence can be very dangerous, and it can result in serious injury or death. If you see two horses fighting, it is important to separate them immediately.

The Horse Industry

The horse industry is a multi-billion dollar industry that involves the breeding, training, and sale of horses. Horses are used for a variety of purposes, including racing, riding, and work.

The horse industry has a long and storied history, but it is also an industry that is plagued by cruelty and abuse. Horses are often subjected to harsh training methods, and they are often forced to live in cramped and

unsanitary conditions. In addition, many horses are slaughtered each year for their meat.

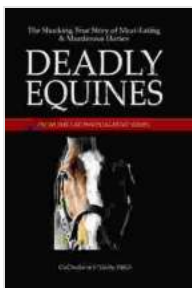

The horse industry is in need of reform. We need to put an end to the cruelty and abuse that is so prevalent in the industry. We need to find more humane ways to train and care for horses. And we need to stop slaughtering horses for their meat.

What You Can Do

There are a number of things you can do to help stop the cruelty and abuse in the horse industry. You can:

- Adopt a horse from a rescue organization
- Support organizations that are working to protect horses
- Educate others about the cruelty and abuse that is happening in the horse industry
- Boycott products that are made from horse meat

Together, we can make a difference. We can help stop the cruelty and abuse in the horse industry and we can create a more humane world for horses.
